

Aquawhirler

The Energizing Spin for your water

In nature, water always moves and it never flows in a linear direction.

To improve the flow of water towards its natural characteristic and therefore making your alkaline drinking water more alive, you may want to improve your ionizer with this aquawhirling function.

Aquawhirler's advantages

- Your water tastes mild and fresh, just like from a natural source
- Your water becomes „fine pored” - the capability to absorb and transport nutrient matter and bio-ionformation improves
- The water transports more oxygen
- The CO₂ level in the water decreases, it becomes more digestible
- Prepared food and drinks taste better and more natural by using the Aquawhirler
- With the integrated gemstone mix you prepare your own personal crystal water which is a well-known water treatment for many

Aquawhirler

The Aquawhirler is completely made up of high-quality V4A stainless steel. When used with water with low pH levels, there is no corrosion.

A small chamber filled with gemstones has been fitted to the outlet just beyond the swirl. The energizing content comprises rock crystals, rose quartz and amethyst.

The Aquawhirling comes into effect even with relatively low water flow, so our Aquawhirler is perfect to be used with a water ionizer.

The water outlet flow is straight. It does not squirt water sideways as is the case with other models.

Technical data

Material: V4A stainless steel • **Measurements:** Total length ca. 31 cm • Total height ca. 12 cm
